|                                                                                                                                                                                                                                                                           |         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Hydrogen bonding potentiality of serine in more aquated environment : crystal and molecular structure of dihydrated DL-serine, $C_3H_7NO_3 \cdot 2H_2O$<br>SIBANI CHAKRABORTY, ASIM K BERA, S GHOSH, S BHATTACHARYA, A K PAL,<br>B P MUKHOPADHYAY AND ASOK BANERJEE ..... | 499–501 |
| Analysis of the pressure dependence of some thermodynamic properties of NaCl-Structure alkali halide crystals using Woodcock potential<br>HARUN R YAZAR AND K ÇOLAKOĞLU .....                                                                                             | 503–506 |
| Preparation and characterization of indium oxide thin films by chemical spray deposition<br>P K MANOJ, K G GOPCHANDRAN, BENNY JOSEPH, PETER KOSHY AND V K VAIDYAN .....                                                                                                   | 507–510 |
| Compositional and temperature dependence of elastic constants for $Zn(PO_3)_2 \cdot x Nd_2O_3$ glasses<br>A A HIGAZY, A H KHAFAGY, SANAA M EL-RABIE AND A S EID .....                                                                                                     | 511–517 |
| Thermodynamic properties and electrical resistivity of liquid MgZn alloys<br>N JHA, A K MISHRA, S M RAFIQUE AND A N SINGH .....                                                                                                                                           | 519–523 |
| Growth of antimony single crystals and dislocation etching<br>C P MANIAR, A H RAVAL AND M J JOSHI .....                                                                                                                                                                   | 525–529 |
| Crystallographic investigation of heratomin ( $C_{16}H_{14}O_4$ )<br>RAJNİKANT, V K GUPTA, K N GOSWAMI AND D K MANGOTRA .....                                                                                                                                             | 531–534 |
| Decay and TL-glow curves of CaS:Er and CaS:Cu phosphors<br>C S GUPTA .....                                                                                                                                                                                                | 535–540 |
| Dielectric relaxation studies of ternary mixtures of non-rigid polar liquids in the MW region<br>G D REWAR AND D BHATNAGAR .....                                                                                                                                          | 541–545 |
| <b>Nuclear Physics</b>                                                                                                                                                                                                                                                    |         |
| Higher configurations-effects on the form factors in $^9Be$ and $^{19}F$<br>R A RADHI .....                                                                                                                                                                               | 547–551 |
| Transverse flow of nuclear matter in hadron-nucleus interactions<br>SUBIR SARKAR AND T D GOSWAMI .....                                                                                                                                                                    | 553–556 |

**Particle Physics**

|                                                                                                                  |         |
|------------------------------------------------------------------------------------------------------------------|---------|
| Comparison of quark jets and gluon jets produced in high energy $e^+ e^-$ annihilations<br>M E ZOMORRODIAN ..... | 557–560 |
|------------------------------------------------------------------------------------------------------------------|---------|

|                                                                                                    |         |
|----------------------------------------------------------------------------------------------------|---------|
| Flux tube structure of dual QCD and confinement<br>H C CHANDOLA, H C PANDEY AND DINESH YADAV ..... | 561–567 |
|----------------------------------------------------------------------------------------------------|---------|

**Notes**

|                                                                                                              |         |
|--------------------------------------------------------------------------------------------------------------|---------|
| Collective, low-lying isoscalar transitions in $^{40}\text{Ca}$<br>ALI H TAQI, R A RADHI AND A K AHMED ..... | 569–571 |
|--------------------------------------------------------------------------------------------------------------|---------|

|                                                                                                                                        |         |
|----------------------------------------------------------------------------------------------------------------------------------------|---------|
| Asymptotics and corrections to asymptotics of non-singlet structure function<br>at low $x$<br>ATRI DESHAMUKHYA AND D K CHOUDHURY ..... | 573–577 |
|----------------------------------------------------------------------------------------------------------------------------------------|---------|

|                                                                                                    |         |
|----------------------------------------------------------------------------------------------------|---------|
| Elastic magnetic M1 form factor of $^{13}\text{C}$<br>A A ABDULLAH, R A RADHI AND Z A DAKHIL ..... | 579–581 |
|----------------------------------------------------------------------------------------------------|---------|

|                          |         |
